UNITED STATES DEPARTMENT OF AGRICULTURE  
BUREAU OF AGRICULTURAL ECONOMICS  
WASHINGTON, D. C.

Cap 2  
February 27, 1951

MONTHLY EGG PRODUCTION, 1949-50

Egg production in the United States in 1950 was 5,004 million dozen, a record high production, about 6 percent more than in 1949, the Bureau of Agricultural Economics announced today. This increase was due to a 5 percent increase in the average number of layers on hand during the year and a 1 percent increase in the rate of egg production per layer. Egg production reached record high levels in all areas of the country except the South Central States. Increases above 1949 were 11 percent in the North Atlantic, 8 percent in the West North Central and the West, 4 percent in the East North Central, 2 percent in the South Atlantic and 1 percent in the South Central States.

At the beginning of 1950 there were 8 percent more layers on farms than a year earlier. However, an 8 percent smaller pullet crop added to the laying flock during the latter part of the year resulted in numbers of layers on January 1, 1951 being 3 percent below a year earlier. The 7 percent larger holdings of hens partly offset the smaller number of pullets. On January 1, 1951 farmers were holding 398,105,000 layers -- 3 percent less than a year earlier. These layers consisted of 62 percent pullets and 38 percent hens compared with 65 percent pullets and 35 percent hens a year earlier.

In 1950 the rate of egg production per layer on hand during the year was 167 eggs, a new high, compared with 165 in 1949. The rate of lay was maintained at record levels in all months of the year except March, April, May and December when it was slightly below record levels for these months.
